

Harvard Core

Dual cure composite for ...

Dual cure flowable composite with good thixotropic behavior for core build-up, posts cementing, cementing of crown, bridges, inlays and onlays.

The advantage of this economical material is thixotropy – it stays where it was applied and flows where it got a touch impulse e.g. root canal post cementation. The material has a very high flexural and compressive strength. Wide range of applications – suitable for three indications. Easy to apply thanks to the convenient minimix syringe.

Properties and advantages

- Versatile – three indications
- Reliable & convenient
- Dual cure
- Universal shade A3
- Economical – good value for money

Harvard Core	
5 ml minimix syringe – A3, 5 mixing tips, 5 intra tips long	7085393
