

Harvard Etch

Thixotropic etching gel for etching of enamel and dentin

The Harvard Etch is used for selective enamel etching and for the total etch technique. Accurate placement is possible due to the optimal consistency.

Properties and advantages

- Selective enamel etching or total etch technique for: Composite restorations, Sealing of fissures, adhesive cementation of inlays, onlays, crowns and bridges
- Optimal consistency: stays where placed
- Thixotropic, controlled etching

Optimal consistency.
